

King Mongkut's University of Technology Thonburi
Faculty of Engineering
Department of Mechanical Engineering

Course Syllabus

<i>Lecture Course:</i>	MEE211: Engineering Mechanics 1 (Statics)
<i>Year/Term:</i>	Second year, First semester
<i>Lecturer(s):</i>	Ekachai Klaiwongwal Pattaramon Jongpradist (pattaramon.tan@kmutt.ac.th) Chawin Chantharasenawong (chawin.cha@kmutt.ac.th)
<i>Duration:</i>	28 hours of lectures (14 sessions of two-hour lectures)
<i>Prerequisite:</i>	PHY111
<i>Tutorial Hours:</i>	Arranged by appointments through email

Objectives

Upon completion of the course, students are expected to

1. be able to perform a thorough force analysis of rigid bodies and simple structures in equilibrium condition
2. be able to determine the centres of gravity and moments of inertia of simple geometric shapes and understand the physical applications of these properties
3. understand the use and be able to perform calculations related to friction forces in various engineering applications
4. understand the concept of virtual work and utilise it correctly

Syllabus

Three-dimensional force systems: Resultant force, Equilibrium of rigid bodies, Moments of force and couples, Vector manipulation in a three-dimensional space

Structural analysis: Pin jointed framework analysis, Static determinacy, Method of sections

Distributed forces: Centres of mass of two-dimensional geometric shapes, Second moments of area of two-dimensional geometric shapes and composite bodies, Parallel axis theorem, Radius of gyration, Perpendicular axis theorem, Products of inertia, Rotation of axis, Principal axes, Mohr circle of inertia

Friction: Friction phenomena, Mechanism of dry friction, Friction angles, Engineering applications of friction, Wedges, Screws, Journal bearings, Disk friction, Flexible belts

Virtual work: Principle of virtual work and virtual displacement. Potential energy and stability.

Course breakdown by lectures

<i>Topic No.</i>	<i>Description</i>	<i>Week(s)</i>
1	<i>Introduction</i> Description of course objectives and outlines. Differences between static and dynamic engineering mechanics. Basic terminologies. Free body diagram.	1
2	<i>Three-dimensional force systems</i> Resultant force. Equilibrium of rigid bodies. Moments of force and couples. Vector manipulation in a three-dimensional space.	2
3	<i>Structures</i> Pin jointed framework analysis. Static determinacy.	3
4	<i>Method of sections</i>	4
5	<i>Distributed forces 1</i> Centres of mass of two-dimensional geometric shapes.	5
6	<i>Distributed forces 2</i> Second moments of area of two-dimensional geometric shapes and composite bodies. Parallel axis theorem. Radius of gyration. Perpendicular axis theorem.	6
7	<i>Distributed forces 3</i> Products of inertia. Rotation of axis. Principal axes. Mohr circle of inertia.	7-8
8	<i>Friction 1</i> Friction phenomena. Mechanism of dry friction. Friction angles.	9
9	<i>Friction 2</i> Wedges. Screws. Journal bearings. Disk friction. Flexible belts.	10-11
10	<i>Virtual work</i> Principle of virtual work and virtual displacement. Potential energy and stability.	12-13

Course notes and delivery

A set of handout will be available online from <http://staff.kmutt.ac.th/~chawin.cha/>
Students are expected to make a copy and bring them to the class.

Handouts contain a summary of the materials described in the syllabus and students should consult recommended textbooks for further information on the subject.

Tutorial solutions will be available one week after the completion of each lecture.

Assessment

The course is assessed by classroom quizzes, tutorials (homework), closed book mid-term and final examinations. The total grade is determined using the following weighting scheme.

1.	Tutorials (homework)		10%
2.	First examination	Thursday 02/07/09	20%
3.	Midterm examination	Between 20/07/09 – 28/07/09	30%
4.	Final examination	Between 28/09/09 – 08/10/09	40%

- Each student is allowed to bring one non-graphical scientific calculator into examinations
- Students whose total marks are below 30% at the end of the semester will receive an *F*-grade and will be required to retake the subject
- Students must be present in all examinations otherwise they will receive an *Fe*-grade. Only extenuating circumstances will be accepted as an excuse for missing an exam. Health related excuses require medical reports and the signature of a physician that provided treatment.

Recommended textbooks

1. *Title:* Engineering Mechanics – Statics, 5th Edition (SI unit)
Author: J. L. Meriam and L. G. Kraige
Publisher: John Wiley & Sons
Relevance: A
2. *Title:* Engineering Mechanics – Statics, 11th Edition (SI unit)
Author: R. C. Hibbeler
Publisher: Prentice Hall
Relevance: A
3. *Title:* Statics – Analysis and Design of Systems in Equilibrium
Author: S. D. Sheppard and B. H. Tongue
Publisher: John Wiley & Sons
Relevance: B
